**EXPERIMENT 4: Create a visual representation in Figma highlighting the key elements of mobile network protocol stacks.**

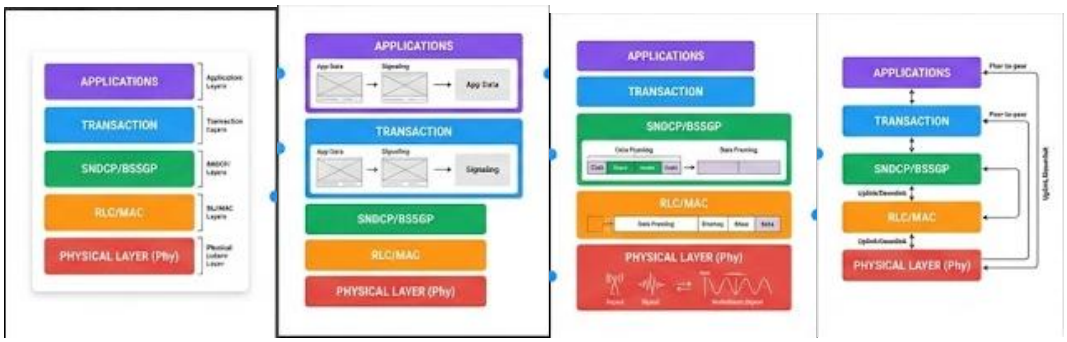

**Aim:**

To create a clear, multi-slide interactive visual representation in Figma highlighting the key elements of mobile network protocol stacks, ensuring all UI components fit perfectly within their designated frames without overflow.

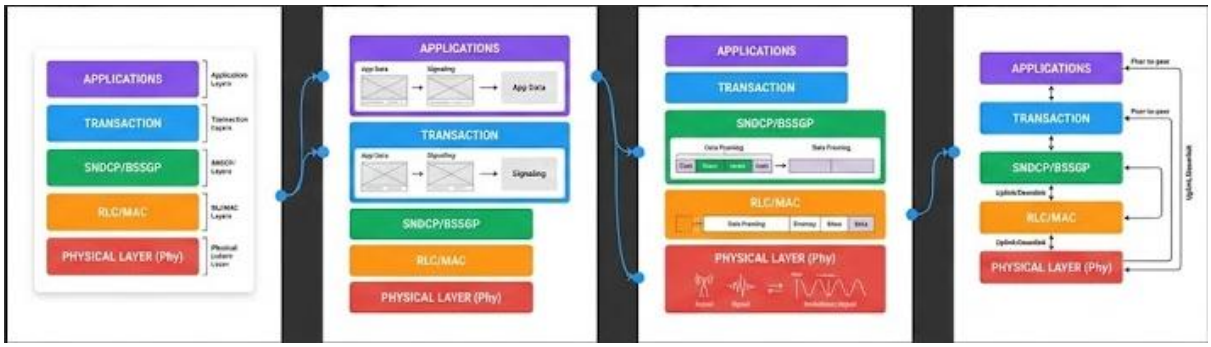

**Procedure:**

1. **Setup Workspace:** Open Figma, create a new design file, and set up a dark workspace canvas.
2. **Create Sequence Frames:** Draw four separate desktop frames arranged horizontally with ample spacing between them.
3. **Design the Layer Blocks:** Inside the frames, draw rectangular blocks to represent the protocol layers (Applications, Transaction, SNDCP/BSSGP, RLC/MAC, Physical Layer).
4. **Scale and Align:** Select the layer blocks and scale them down. Use Figma's alignment tools to center them within each frame, ensuring wide, clean margins on all sides so no elements overflow or touch the frame borders.
5. **Color Code:** Apply uniform colors to each specific layer (e.g., Purple for Applications, Blue for Transaction, Red for Physical).
6. **Detail the Breakdown:**
    - On Frame 1, show the full high-level stack.
    - On Frame 2, highlight the upper layers.
    - On Frame 3, highlight the lower layers.
    - On Frame 4, show the logical peer-to-peer connection lines.
7. **Link the Flow:** Switch to the "Prototype" tab. Drag the blue circular prototype nodes from one frame to the next. Set the interaction to "On click -> Navigate to -> Smart Animate".
8. **Test & Finalize:** Click the "Present" button to test the prototype, verifying that the margins remain clean and the layout is fully contained during transitions.

**Diagrams:**

**Prototype:**

**Result:**

A refined, multi-frame interactive prototype of the mobile network protocol stacks was successfully designed in Figma. All protocol blocks and communication lines were appropriately scaled and centered, resulting in a crisp, professional layout that fits perfectly inside the desktop frames with zero overflow, connected by seamless prototyping arrows.
